

# CPOMS StudentSafe for Nurseries and Early Year Settings

Streamline Safeguarding Processes for Earlier Interventions

## What is it?

CPOMS StudentSafe supports your nursery's Safeguarding, Attendance and Wellbeing systems and processes. The software is highly intuitive so nursery managers and early years practitioners can easily log incidents, causes for concern and notes - all in one simple, easy-to-use system. As information is entered, a child's chronology is automatically constructed so you can see a clear picture and connect the dots early on for better results. The cloud-based software provides a secure, centralised way to store and access sensitive data.

## Why is it Important?

CPOMS StudentSafe software helps early years settings focus on improving outcomes for children by bringing to light any concerns early on. When situations require more extensive intervention, the software helps safeguarding practitioners efficiently manage cases, collaborate with other agencies and maintain urgency and focus throughout the process. Comprehensive reporting helps administrators identify trends and effectively prepare for Ofsted inspections as well as caregiver and other stakeholder meetings.

Furthermore, StudentSafe frees staff to focus more of their time caring for children and less time weighed down by administrative burdens.

## Benefits

### Ease the Process

Simplify nursery safeguarding tasks, including case creation, secure data sharing across settings, incident and concern monitoring, and more.

### Connect the Dots

Bring all the bits of information together in a secure, centralised place to see a chronology emerge early on of a child in need of help.

### Improve Outcomes

Clearly see where help is needed and pave the way for all children to thrive.

## Key Features

### Premium Cases and Forms

Escalate any incident directly into a case for greater clarity and more effective case management. Link previous and future incidents to a case and collaborate more efficiently with staff and other agencies.

### Centralised Chronology

With the tools and software to empower staff to submit early concerns about children in a secure, centralised place, safeguarding practitioners can promptly see a chronology emerge if a child needs help.

### Fully Customisable

Tailor StudentSafe software to meet your nursery's precise needs, including categories of concern, user roles and permissions, input forms and alerts. This helps ensure an effective, easy-to-use tool for nursery managers, early years practitioners and support staff.

### Powerful Reporting

By capturing all safeguarding, wellbeing and attendance initiatives, dashboards and report analysis can provide significant insights within your nursery's cohorts.

### Audit Controls

All incidents, actions and key transactions are time, date and user stamped. Consequently, an audit trail is maintained that accurately records all activities undertaken using the system. Now you can track and analyse what has been done, by whom and when.

### Comprehensive Safeguarding

Ensure comprehensive safeguarding with customisable forms and cases that link together, helping staff standardise reporting and recording processes across multiple nurseries, making group-level management more efficient and consistent.

### Highly Secure

With intelligent role-based access, CPOMS StudentSafe allows each nursery to control which staff has access to what information and when.

## About Us

Used by more than 18,500 Establishments in 68 countries **globally**, CPOMS is the market-leading software for monitoring Safeguarding, wellbeing and all pastoral issues.

*"CPOMS has changed the way we work with safeguarding, any one of the DSL team can quickly and easily see what has been added about child and can action this from anywhere. At the click of a button I have the full picture about a child without having to leaf through endless pieces of paper. Even the biggest 'technophobe' in my school can add concerns to CPOMS."*
