CPOMS for Multi-academy Trusts

Empowering Academies to Uphold and Enhance their Safeguarding Initiatives.

What is it?

CPOMS software supports your academy's systems and processes that work to monitor Child Protection, Safeguarding, pastoral and welfare concerns for pupils.

The software is highly intuitive, with a built-in, easy-to-use log form. This allows school staff to log incidents that should be raised for concern - all in one place. As information is entered, a student's chronology is automatically constructed so you can see a clear picture with little effort. The cloud-based software provides a secure, centralised way to store and access sensitive data from any device with an internet connection.

Why is it Important?

CPOMS software helps lessen the burden on staff to record and manage concerns, prepare reports and perform other administrative duties. Academy schools can quickly gain efficiencies whilst focusing on the wellbeing of pupils. When it comes to inspections, CPOMS software helps schools confidently demonstrate their Safeguarding systems and processes that work to protect pupils and that exercise urgency in referring to the appropriate agencies, whilst providing clear, effective and secure record-keeping.

Highlights

Ease the Process
Drastically simplify safeguarding tasks, including secure data sharing, student transfers, stakeholder reporting and more, freeing up staff to focus on pupils.

Connect the Dots
Bring all the bits of information together in a secure, centralised place to see a chronology emerge early on of a child in need of help.

Improve Outcomes
Leverage the power of CPOMS to see clearly where help is needed and pave the way for all students to thrive.

Key Features

Customisation
Tailor CPOMS software to meet your academy school's exact needs, including categories of concern, user roles and permissions, input forms and alerts. This helps ensure an effective, easy-to-use tool for staff, DSLs and Headteachers.

Role-based Access
The enterprise-level permissions system allows each school to uniquely control which members of staff can access each type of sensitive information.

MIS Integration
Integration with leading MIS systems prevents the need to enter data twice. CPOMS adds complementary value to existing MIS systems by delivering specialist functionality together with effective management information, trend analysis and useful statistics.

Student Transfers
CPOMS allows schools, with the appropriate consent, to readily obtain and share any portion of a Child Protection history for pupils transferring to and from your school, ensuring continuity of care.

Audit Controls
All incidents, actions and key transactions performed in CPOMS are time, date and user-stamped. Consequently, an audit trail is maintained that accurately records all key activities undertaken using the system. Now you can track and analyse what has been done, by whom and when.

Reporting
Easily prepare summary reports for teachers, management reports for trustees and statistical breakdowns highlighting student concerns or trends.

About Us
Used by more than 18,500 Establishments in 68 countries **globally**, CPOMS is the market-leading software for monitoring Safeguarding, wellbeing and all pastoral issues.

> "CPOMS has transformed the way we report, record and monitor Safeguarding across our Trust. It enables a 360 degree perspective of the child or young person and ensures that every contact, incident and concern forms part of the wider case chronology... It is user-friendly and does not require additional training, but the support team at CPOMS are happy to support with this or any other query which may need addressing. I wouldn't hesitate to recommend it to other Academies."
